

Detailed Release Notes Summary dbMap/Web 2017.3

Enhancements

dbMap/Web - Client

- [60678](#) Database Network ACL is now automatically updated when spatial web service configuration is modified (Santos)
- [68821](#) PZ Calculator (Santos)
- [69733](#) Mapping - Configure additional WMS base layers (Origin)
- [67920](#) Well Spec Card - Limit creation to only those with an authority level of Preparer (Origin)

dbMap/Web - General

- [69624](#) Well Logs Browser - Performance improvements
- [69703](#) Absence of add and edit options on the well top's interpreter lookup fixed
- [67606](#) Export report now excludes hidden columns
- [69674](#) Stratigraphic units alias reference screen created

Detailed Release Notes Summary dbMap/Web 2017.3

Bug Fixes

dbMap/Web - Client

- [69722](#) Fixed SQL error in well test panel (Origin)
- [69575](#) Well Spec Card - Find nearby wells returns correct wells and allow a WSC to be copied (Origin)
- [69719](#) Missing search options added to well search (Origin)
- [69729](#) Axes that cannot be edited in production charts made unavailable for edit selection(Santos)

dbMap/Web - General

- [69555](#) When adding a new Records Management item, selecting an area based now shows the Name of the selected area
- [69731](#) Eventually incorrect axis range when loading the next well and editing axes on production charts fixed
- [69533](#) Exporting sub-panel lists to Excel from within desktop dbMap, now exports the rows shown not all rows from the database
- [69422](#) Search drop down is now retained when switching back to top level menu item

dbMap/Web - PLDB

- [69331](#) Post Well Audit creation bug fixed (Pldb)

Petrosys Release dbMap/Web 2017.3

Detailed Release Notes

[dbMap/Web - Client](#) [Enhancements](#)

Database Network ACL is now automatically updated when spatial web service configuration is modified (Santos) 60678

If changes are required to the Santos spatial web service configuration, it now automatically re-creates the the database Network ACL when you modify the WEB_SERVICE_CONFIG settings in Admin/Reference tables/General. This means it no longer requires DBAs to separately run the database SQL script (psys_ws_create_acl_v02.sql) after the changes have been made.

PZ Calculator (Santos) 68821

Process has been added to automatically create an interpretation for new Well Test records. The interpretations can be extracted to a report template including a P/Z plot.

Mapping - Configure additional WMS base layers (Origin) 69733

Extra in-house WMS layers have been made available as base layers within the dbMap/Web mapping functionality.

Well Spec Card - Limit creation to only those with an authority level of Preparer (Origin) 67920

Added a security restriction, to prevent users that do not have the "Preparer" authority level, from creating Well Spec Cards.

[dbMap/Web - Client](#) [Bug Fixes](#)

Fixed SQL error in well test panel (Origin) 69722

A bug causing sporadic SQL errors when a new well test was being created has been fixed.

Well Spec Card - Find nearby wells returns correct wells and allow a WSC to be copied (Origin) 69575

Fixed a bug causing incorrect wells to be returned by the "Find Nearby Wells" option.

Fixed a bug preventing a WSC from being copied.

Missing search options added to well search (Origin) 69719

Some search options that existed in the original ORIGIN customisation have been added to the PPDM38 ORIGIN version.

Axes that cannot be edited in production charts made unavailable for edit selection(Santos) 69729

A bug, allowing the user to select, for editing, an axis that doesn't accept changes on a production chart, has been fixed; now only axes that can be edited are selectable.

Well Logs Browser - Performance improvements 69624

The well logs browser screen filled up its panels via a set of complex queries, all of them trying to retrieve data from records management, which added a performance penalty. These references to records management data have been removed, resulting in a performance improvement.

Absence of add and edit options on the well top's interpreter lookup fixed

69703

A bug, preventing the user from adding or editing a record while performing a lookup for a formation top's interpreter, has been fixed.

Export report now excludes hidden columns 67606

When running Reports with columns named as 'hidden', these used to be included in the Excel output, now they are hidden.

Stratigraphic units alias reference screen created 69674

A new screen, allowing for the creation of aliases to stratigraphic units, has been added to the PPDM38 standard version of dbMap/Web.

When adding a new Records Management item, selecting an area based now shows the Name of the selected area

69555

A bug preventing the name of a selected Area when adding a new Records Management item has been fixed to the name is now shown for each selected Area.

Eventually incorrect axis range when loading the next well and editing axes on production charts fixed

69731

A bug, causing an axis range to be incorrectly kept when a user navigated to a next well on a production chart, has been fixed; axes ranges now adapt to the well currently on display.

Exporting sub-panel lists to Excel from within desktop dbMap, now exports the rows shown not all rows from the database

69533

When viewing a Well, or any top-level panel, from within desktop dbMap, and exporting any of the sub-panel lists now exports the rows shown instead of exporting all rows from the database.

Search drop down is now retained when switching back to top level menu item

69422

A bug preventing the search selector from being saved when a new top block was selected by a user has been fixed: now dbMap/Web "remembers" the whole search condition if a user switches to another block and then returns.

Post Well Audit creation bug fixed (Pldb) 69331

A bug that caused an error when one tried to create a post well audit record has been fixed.
