

Petrosys add-in for ArcGIS Pro

Next level connectivity from Petrosys

The Petrosys add-in for ArcGIS Pro allows users to **directly display subsurface data inside ArcGIS Pro live** from their chosen E&P source, including wells from OSDU, seismic navigation from Petrel, grids from DecisionSpace and more.

Choose from a wide range of common E&P software, file formats, databases and data platforms. These are just some examples.

- Petrosys technology allows you to connect to multiple subsurface & interpretation data sources.
- Display wells, well paths, seismic navigation and surfaces, grids, contours & fault polygons.
- Find and interact with data more easily.
- Geologically accurate contour & fault relationships.
- Synchronise with your chosen E&P source, update & finalise the map.

AVAILABLE IN PETROSYS PRO 2021.1 – contact info@petrosys.com.au to find out more.
